General Fire Behavior

Major runs in the bay shrubs and southern rough fuels have been observed. Currently smoldering ground fire has been observed along with active burning in the litter and flare-ups in the shrubs that die back down. The fire has burned actively in green and cured fuels. Torching has been observed with some spotting. Watch for needle/leaf cast on all divisions which will provide surface fuels for smoldering or active ground fire.

Predicted Fire Behavior for Today

Fine fuels will dry out quickly and the fire will become active in the early afternoon.

Organic soils continue to dry. The fire will become active earlier in the afternoon. Expect continued smoldering and active fire in organic soils. Ground fire will be the ignition source for cured and green fuels to burn and cause torching and spotting. Expect reburn in areas with heavy needle cast and smoldering ground fire. Rates of spread and flame lengths are given for flanking fire and head fire in the table below. Spotting distances and probabilities of ignition are also given.
